Plenary Lectures

Celebrating 50 years of distillation and absorption conferences <i>Richard Darton</i>	1
Shell's response to climate change and the challenges in innovation <i>Frigyes Lestak, Annet Stones and Jose Bravo</i>	5
New solvent systems for distillation and absorption intensification <i>Matthias Seiler</i>	13
Heat pumps in distillation <i>Dolf Bruinsma and Simon Spoelstra</i>	21
Systematic Optimization-based Synthesis of Hybrid Separation Processes <i>Wolfgang Marquardt, Korbinian Kraemer, Andreas Harwardt</i>	29
Research on mass transfer columns "old hat or still relevant?" <i>Michael Schultes</i>	37
Carbon capture and storage experiences from the Sleipner field <i>Even Solbraa</i>	43

Energy Efficiency

A design simplification of the ideal heat-integrated distillation column <i>Kejin Huang, Haisheng Chen, and Shaofeng Wang</i>	49
Identifying optimal mixture properties for HiDiC application <i>Andreas Harwardt, Korbinian Kraemer and Wolfgang Marquardt</i>	55
Multicomponent distillation configurations with large energy savings <i>Vishesh H. Shah and Rakesh Agrawal</i>	61
Multi objective optimisation for an economical dividing wall column design <i>Christoph Hiller, Sandra Storm, Matthias Leipold and Georg Fieg</i>	67
Exergy losses relation with driving forces in distillation column <i>Seyed Ali Ashrafizadeh, Majid Amidpour, Zohre Heydariceresht</i>	73
Synthesis and optimization of demethanizer flowsheets for low temperature separation processes <i>Muneeb Nawaz and Megan Jobson</i>	79

Conceptual design and comparison of four-products dividing wall columns for separation of a multicomponent aromatics mixture <i>Igor Dejanović, Ljubica Matijašević, Žarko Olujić, Ivar Halvorsen, Sigurd Skogestad, Helmut Jansen and Björn Kaibel</i>	85
Establishing internal configuration of dividing wall column for separation of a multicomponent aromatics mixture <i>Ivar J. Halvorsen, Igor Dejanović, Ljubica Matijašević, Žarko Olujić and Sigurd Skogestad</i>	91
Carbon Dioxide Capture	
Energy efficient synthesis and design for carbon capture <i>Angelo Lucia, Anirban Roy and Mikhail Sorin</i>	97
Pilot plant experiments with MEA and new solvents for post combustion CO ₂ capture by reactive absorption <i>Hari Prasad Mangalapally, Hans Hasse</i>	103
Optimized absorber design for post-combustion CCS <i>Markus Duss and Abhilash Menon</i>	109
Update on aqueous ammonia based post combustion capture pilot plant at Munmorah <i>Hai Yu, Scott Morgan, Andrew Allport, Thong Do, Aaron Cottrell, James McGregor and Paul Feron</i>	115
Use of multi-scale simulations for lowering the cost of carbon dioxide capture <i>Ludovic Raynal, Patrice Font, Tânia Janeiro, Yacine Haroun and Pierre-Antoine Bouillon</i>	121
Hyperbranched polymers in absorption: experimental CO ₂ solubilities <i>Walter Martini, Harvey Arellano-Garcia and Günther Wozny</i>	127
Absorption of carbon dioxide into piperazine activated aqueous N-methyldiethanolamine <i>Arunkumar Samanta and S. S. Bandyopadhyay</i>	133
Benchmarking solvents for carbon capture <i>Ralph H. Weiland, Nathan A. Hatcher and Jaime L. Nava</i>	139
Mass transfer and pressure drop of a novel structured packing for CO ₂ post-combustion capture <i>Pascal Alix, Ludovic Raynal, Aude Royon-Lebaud, François Abbe, Jean-Pierre Maumus, Aras Ahmadi, Michel Meyer, Michel Prevost, David Rouzineau</i>	145
CO ₂ capture solvent selection by combined absorption-desorption analysis <i>Ugochukwu E. Aronu, Hallvard F. Svendsen, Karl Anders Hoff</i>	151
Carbon dioxide chemical absorption with glucosamine in air-lift reactor <i>Alicia García-Abuín, Diego Gómez-Díaz, José M. Navaza, Isabel Vidal-Tato</i>	157
Rate based modeling and validation of a CO ₂ pilot plant absorption column operating on MEA <i>Levente L. Simon, Yannick Elias, Graeme Puxty, Yuli Artanto and Konrad Hungerbuhler</i>	163

Carbon dioxide absorption into biphasic amine solvent with solvent loss reduction <i>Jiafei Zhang, Onyekachi Nwani and David W. Agar</i>	169
Aqueous solutions of pyrrolidine for carbon dioxide capture <i>Antonio Blanco, Alicia García-Abuín, Diego Gómez-Díaz, José M. Navaza, Isabel Vidal-Tato</i>	175
Development of task specific hyperbranched polymers for the separation of carbon dioxide: carbon capture and biogas upgrade <i>Johannes Völkl, Jörn Rolker and Wolfgang Art</i>	181
Preliminary analysis of process flow sheet modifications for energy-efficient CO ₂ capture from flue gases using chemical absorption <i>Ashleigh Cousins, Leigh T. Wardhaugh and Paul H.M. Feron</i>	187
Capital costs and energy considerations of different alternative stripper configurations for post combustion CO ₂ capture <i>Mehdi Karimi, Magne Hillestad, Hallvard F. Svendsen</i>	193
Integrated, Hybrid and Novel Processes	
Energy efficient hybrid processes for ethanol dehydration – A comparison of benchmark and membrane assisted configurations <i>Tim Roth, Peter Kreis and Andrzej Górak</i>	199
Systematic synthesis of dividing-wall columns for multicomponent distillations <i>Ben-Guang Rong</i>	205
Innovative biodiesel production by heat-integrated reactive absorption <i>Anton A. Kiss</i>	211
Development and modelling of micro distillation column <i>Aarne Sundberg, Petri Uusi-Kyyny, Kaj Jakobsson and Ville Alopaeus</i>	217
The D+R tray: novel laboratory equipment for studying heterogeneously catalyzed reactive distillation - design and simulation-based validation <i>Erik von Harbou, Markus Schmitt, Sandra Parada, Christoph Grossmann, Hans Hasse</i>	223
Carbon dioxide capture for the oxidative coupling of methane process – a case study in mini-plant scale <i>S. Stünkel, M. Brehmer, T. Brinkmann, J.-U. Repke, R. Schomäcker and G. Wozny</i>	229
Methodology for design and analysis of reactive distillation involving multi-element systems <i>Amnart Jantharasuk, Rafiqul Gani, Andrzej Górak and Suttichai Assabumrungrat</i>	235
A novel process concept for the production of ethyl lactate <i>Harvey Arellano-Garcia, Robert Kraus and Günter Wozny</i>	241
Development of a model for the synthesis of unsaturated polyester by reactive distillation <i>M. Shah, E. Zondervan, M.L. Oudshoorn, A.B de Haan</i>	247
Reactive dividing-wall columns: towards enhanced process integration <i>Anton A. Kiss, J. J. Pragt, C. J. G. van Strien</i>	253

Contents

Novel graphical methods for complex membrane configurations <i>Mark Peters, Shehzaad Kauchali, Diane Hildebrandt, and David Glasser</i>	259
Synthesis of novel ternary heterogeneous azeotropic distillation flowsheets <i>Paritta Prayoonyong and Megan Jobson</i>	265
An introduction to new Hige device and its industrial applications <i>Wang G. Q., Xu Z. C., Li X. H., Ji J. B.</i>	271
Catalytically activated SiC foam for reactive distillation <i>Julien Lévêque, David Rouzineau, Michel Prevost and Michel Meyer</i>	277
Effect of hydrodynamic conditions on mass and heat transfer in a novel membrane based continuous micro-distillation device: experimental approach <i>Chafika Adiche, Kai Sundmacher</i>	283
Experimental validation of a new double-column system for heteroazeotropic batch distillation <i>Ferenc Denes, Peter Lang and Xavier Joulia</i>	289
Solvent recovery from a multicomponent mixture by batch extractive distillation and hybrid process <i>P. Lang, L. Hegely, G. Kovacs, J. Gaal-Szilagyi and B. Kotai</i>	295
Reactive packed bubble column for the synthesis of isopropyl myristate <i>M.C. de Jong, E. Zondervan, A.C. Dimian and A.B. de Haan</i>	301
Biodiesel production from reactive distillation process: a comparative study between experimental results and simulation <i>Nívea de Lima da Silva, Carlos Mario Garcia Santander, César Benedito Batistella, Rubens Maciel Filho, Maria Regina Wolf Maciel.</i>	307
Selective removal of carbon dioxide from aqueous ammonia solutions <i>Jan F. Maćkowiak and Andrzej Górak</i>	313
Cyclohexanol production from cyclohexene in a reactive divided wall column: a feasibility study <i>Suman Thotla, Amit Katariya, Hannsjoerg Freund, Kai Sundmacher</i>	319
Basic Data	
Effect of nitric and sulfuric acids on NO _x and SO _x absorption into oxido-acidic solutions <i>Isabelle Liémans and Diane Thomas</i>	325
Evaporation in reacting systems with liquid phase splitting <i>Alexander Toikka</i>	331
Extractive distillation of ethylbenzene and styrene using sulfolane as solvent: low pressure isobaric VLE data <i>Mark Jongmans, Adriaan Luijks, Jenny Maassen, Boelo Schuur and André de Haan</i>	337
A small static total pressure vapour-liquid equilibrium cell a case study with methanol+methylformate <i>Petri Uusi-Kyyry, Aarne Sundberg and Ville Alopaeus</i>	343

The simulation of VLE in ternary systems with two ternary azeotropes <i>Alla K. Frolkova, Tatiana V. Chelyuskina</i>	349
Absorption rates of CO ₂ into solutions of mono-ethanolamine/2-propanol <i>L.J. du Preez, C.E. Schwarz, J.H. Knoetze</i>	353
Experimental study on contact angle of ethanol and n-propanol aqueous solutions on metal surfaces <i>C.X. Zhou, X.G. Yuan, L.T. Fan, A.W. Zeng, K.T. Yu, M. Kalbassi and K. E. Porter</i>	359
Phase equilibria of organic sulfur compounds for cleaner fuels <i>Erlin Sapei, Petri Uusi-Kyyny, Kari I. Keskinen, Juhani Aittamaa</i>	365
New methodology of determination of boiling point at very low pressure: petroleum case <i>M.S. Lopes, P. Sbaite, C.B. Batistella, M.R. Wolf Maciel, R. Maciel Filho, A. de Oliveira Gomes, L.C. Medina</i>	371
Modeling and experimental study of carbon dioxide absorption into aqueous amine based solvents <i>Lionel Dubois and Diane Thomas</i>	377
Modeling and Simulation	
A memetic algorithm for the design optimization of reactive distillation columns <i>Maren Urselmann, Sebastian Engell</i>	383
Optimal design methodology for dividing wall columns <i>Claudia Gutiérrez-Antonio, Abel Briones-Ramírez</i>	389
A new mass transfer correlation for structured packings: implications for rate-based distillation calculations <i>Brian Hanley and Hiren Shethna</i>	395
Rate-based modeling of two commercial scale H ₂ S stripping columns <i>Ross Taylor, Peter Wilkinson and Harry Kooijman</i>	401
A computational fluid dynamics and an experimental approach to the effects of push valves on sieve trays <i>Rahbar Rahimi, Ali Zarei, Taleb Zarei, Hamed Naziri Firoozsalari, Mortaza Zivdar</i>	407
Design of complex distillation columns separating ternary heterogeneous azeotropic mixtures <i>Paritta Prayoonyong and Megan Jobson</i>	413
Generalized methodology for optimal configurations of hybrid distillation-pervaporation processes <i>Yellaiah Naidu and Ranjan K. Malik</i>	419
Column profiles for membrane column sections <i>Mark Peters, Shehzaad Kauchali, Diane Hildebrandt, and David Glasser</i>	425
Thermodynamic insight on extractive distillation with entrainer forming new azeotropes <i>Ivonne Rodriguez Donis, Vincent Gerbaud and Xavier Joulia</i>	431

Contents

Short-cut methods for the optimal design of simple and complex distillation columns <i>Chafika Adiche, Alfons Vogelpohl</i>	437
Optimal design methodology for azeotropic distillation columns <i>Claudia Gutiérrez-Antonio, Abel Briones-Ramírez</i>	443
Boundary value design method for complex demethanizer columns <i>Muneeb Nawaz and Megan Jobson</i>	449
Rate-based mass transfer performance analysis of [emim][EtSO ₄] and ethylene glycol in the extractive distillation of water-ethanol mixtures <i>Esteban Quijada, Wytze Meindersma and André de Haan</i>	455
A short method to calculate reactive residue curve maps <i>M. Carrera-Rodríguez, J. G. Segovia-Hernández and A. Bonilla-Petriciolet</i>	461
Geometry of subsets of optimality in extractive distillation of multicomponent mixtures <i>Andrey V. Timoshenko, Boris B. Dolmatov, Elena A. Anokhina and Vladimir S. Timofeev</i>	467
Ionic liquid selection and performance evaluation for the separation of methylcyclohexane/toluene by extractive distillation <i>Juan Pablo Gutierrez, Wytze Meindersma and André B. de Haan</i>	473
A study on sieve tray lower operating limit <i>Ali Zarei, Rahbar Rahimi, Taleb Zarei, Nader Naziri</i>	479
Novel minimum reflux calculation using eigenvector maps <i>Ronald Abbas, Simon Holland and Ivar Halvorsen</i>	485
Distillation boundaries in ternary heteroazeotropic systems <i>Andrzej R. Królikowski</i>	491
CFD simulations of flow, heat and mass transfer in thin-film evaporator <i>Andrzej Kolek, Janusz Dziak and Lechoslaw Krolikowski</i>	497
Development & application of continuous thermodynamics for studying physicochemical properties of petroleum fractions <i>Laura P. Tovar, Maria R. Wolf-Maciel, Cesar B. Batistella, Rubens Maciel-Filho, Alexandre de O. Gomes, Lilian C. Medina</i>	503
Design of feed distribution system in a falling film distillation using CFD <i>Joel G. Teleken, Leandro O. Werle, Jaçanã G B. Parisotto, Cintia Marangoni, Ana Paula Meneguelo, Ricardo A F. Machado</i>	509
Shortcut methods for the design of heteroazeotropic distillation of multicomponent mixtures <i>Korbinian Kraemer, Andreas Harwardt and Wolfgang Marquardt</i>	515
Simulation of anhydrous bioethanol production process using efficiency correlations for conventional and extractive distillation <i>Tassia L. Junqueira, Marina O.S. Dias, Maria Regina Wolf-Maciel, Rubens Maciel Filho and Carlos E.V. Rossell</i>	521

Control and Operation

Practical control of dividing-wall columns <i>Jens Strandberg, Sigurd Skogestad and Ivar J. Halvorsen</i>	527
Distillation pressure control troubleshooting – the hidden pitfalls of overdesign <i>Jacques van der Merwe</i>	533
Study of control properties of intensified thermally coupled distillation sequences <i>Juan Gabriel Segovia-Hernández, Rodolfo Murrieta-Dueñas, Roberto Gutiérrez-Guerra, Salvador Hernández</i>	539
Improved control strategies for dividing-wall columns <i>Anton A. Kiss, Ruben C. van Diggelen</i>	545
Double column batch rectifier in closed mode for pressure swing batch distillation <i>G. Modla</i>	551
Product composition of a pressure swing double column batch rectifier <i>Arpad Kopasz, Gabor Modla, Peter Lang</i>	557
Optimal operation of thermally coupled Kaibel distillation columns <i>Maryam Ghadrdan, Ivar Halvorsen and Sigurd Skogestad</i>	563
Development of a system for the design of control structures for dividing wall columns <i>Christina Buck, Georg Fieg, Virginia Green</i>	569

Equipment Design and Operation

Structured packing efficiency measurement – vital information for the chemical industry <i>Markus Ottenbacher, Žarko Olujić, Michael Jödecke, Christoph Großmann</i>	575
Extended channel model for prediction of hydraulics and mass transfer of random packed columns for gas-liquid systems <i>Jerzy Maćkowiak</i>	581
Characterization and quantification of the quality of gas flow distributions <i>Carsten Stemich and Lothar Spiegel</i>	587
Experimental investigation on the effect of packing material textures on the liquid-side mass transfer <i>Martin Kohrt, Ilja Ausner and Jens-Uwe Repke</i>	593
Measurement of liquid hold-up in catalytic structured packings: comparison of different experimental techniques <i>Aurora Viva, Said Aferka, Dominique Toye, Pierre Marchot, Michel Crine and Elisabetta Brunazzi</i>	599
Maximizing the performance of corrugated sheet structured packings <i>Žarko Olujić, Thomas Rietfort, Helmut Jansen, Björn Kaibel, Egon Zich, Gerhard Ruffert, Torsten Zielke</i>	605
Tray stability at low vapor load <i>Daniel R. Summers, Lothar Spiegel and Ekaterina Kolesnikov</i>	611

Contents

Understanding maldistribution in 3-pass trays <i>Henry Z. Kister and Matthew Olsson</i>	617
Designing trays for selective treating <i>Ralph H. Weiland, Nathan A. Hatcher and Jaime L. Nava</i>	623
Improved high performance trays <i>Stefan Hirsch and Mark Pilling</i>	629
Experimental characterization of ceramic sponges as column internals <i>Julia Große and Matthias Kind</i>	635
Mass transfer equipment design considerations for cryogenic absorbers, demethanizers and deethanizers <i>Glenn Shiveler, Daniel Egger, Tim Oneal</i>	641
Measurement and correlation of clear liquid height on small hole distillation sieve tray <i>L.T. Fan, X.G. Yuan, A.W. Zeng, K.T. Yu, M. Kalbassi and K.E. Porter</i>	647
On the development of an energy efficient packing for vacuum distillation <i>A. Shilkin, K. Heinen, C. Großmann, A. Lautenschleger, A. Janzen, E.Y. Kenig</i>	653
Establishing a facility for the hydrodynamic characterisation of distillation column internals <i>E.C. Uys, S.M. Lamprecht, C.E. Schwarz, A.J. Burger, I. Nieuwoudt, A.B. Erasmus and J.H. Knoetze</i>	659
Commercial scale test validation of modern high performance random and structured packings for CO ₂ -capture ranking <i>Michael Schultes, Simon Chambers, Brad Fleming</i>	665
Experimental investigations of biodiesel as an alternative absorbent for the recovery of aromatic hydrocarbons under industrial conditions <i>Michael Th. Müller, Holger Thielert, Diethmar Richter, Jens-Uwe Repke, Günter Wozny</i>	671
INTALOX [®] ULTRA [™] random packing – pushing the envelope <i>Izak Nieuwoudt</i>	677
Process Troubleshooting and Handling Operational Problems	
Design-troubleshooting of an absorption column – importance of details <i>Ron Stockfleth</i>	681
Diagnostics of high pressure depropanizer <i>Lowell Pless, Christopher McKeown and Simon Xu</i>	687
Vacuum tower wash section design: myth and reality <i>Mario Roza and Mark Pilling</i>	693
Author index	699
